David Ajawu

A software developer with a customer-driven nature, I have also cultivated the ability to manage competing priorities to produce high-quality output and task ownership from task assignment through testing and deployment over the course of 2 plus years working in fast-paced environments.

WORK EXPERIENCE

Stackfill   (January 2021 - May 2021)
Software Developer

Stackfill is a logistics and supply chain management company. I reduced the time required for product sourcing by up to 40% by building a website to shop that allows users to purchase goods from multiple supported Asian e-commerce websites and pay with any valid Nigerian debit or credit card. The website was built using Django, HTML, CSS, Javascript and deployed on Digital ocean. The website eliminated the manual process of receiving the product link from the customers via WhatsApp and visiting each link to extract the order details. I also built a web scraper to extract product details from a supported website via the link to the product information, this was built with requests, beautifulsoup, fast API, and deployed on Digital Ocean.

KiakiaPower   (January 2020 - December 2020)
Software Developer

I built the key product (a website to purchase tokens for electric prepaid meters) from the ground up using Django, HTML, CSS, Vanilla Javascript, Redis, PostgreSQL and deployed it on Digital Ocean and google app engine.

CrowdForce   (January 2019 - August 2019)
Intern

I improved the speed of data analysis by up to 70% and helped reduce errors during the data validation process by building a data export service to generate a report of all data collected in excel format. I also cut down the time required to send validated data to the company's partner by building a custom python script to automate the upload process.

EDUCATION

Covenant University   (August 2015 - December 2020)
Bachelor's Degree Computer Science

HIGHLIGHTED PROJECTS

Classic Gentlemen
https://classicgentlemen.com.ng/

A website to automate the activities of the Classic Gentlemen's club such as membership fee payment, event management and an online gallery of past programs. The site was built with Django, PostgreSQL, Celery, Bootstrap, HTML & CSS and deployed on AWS.

Identito
https://ajawu.github.io/identito/

I built the landing page for an identity and address verification company (Identito) with **Bootstrap**, Javascript, HTML & CSS

KDF
https://github.com/ajawu/kdf-website

A contact/portfolio website for an engineering company (KDF) in Nigeria with a contact page, services page, past products page and an email update sent for each new contact message. The website was built with **Django**, **Celery**, **Bootstrap**, HTML & CSS

Neue
https://github.com/ajawu/neue

An eCommerce website for an art gallery Neue that sells the works of independent artists online. It includes a landing page, contact page, product listing page, artist details page, cart, reviews, authentication pages(login, register, password change, and reset). It was built with **Django**, **Bootstrap**, **PostgreSQL**, **Docker**, HTML & CSS and deployed on **Digital Ocean**
